## RESEARCH PROJECTS

---

- **Assessing carbon cycle uncertainty in simple models, July 2023 - June 2024 (current)**  
Assessing structural uncertainty and global carbon budgets by (1) coordinating inter-model comparison project (MIP) of net-zero pathways across simple climate models and emulators of the carbon cycle and (2) progressively increasing model complexity within one model, FaIR (funded by UW PCC).
- **Modeled nearly-enclosed bays as refugia on Snowball Earth, July 2021 - June 2023**  
Simulated influence of land surface albedo and CO<sub>2</sub> on Snowball Earth refugia using CESM2 (CAM5, SLIM, CICE5) (funded by NSF).
  - Publication: **Shum, G. E. M.**, M. M. Laguë, A. L. S. Swann, C. M. Bitz, E. D. Waddington, S. G. Warren (in prep.): Ocean bays surrounded by desert land could support life on Snowball Earth.
- **Modeled impact of forest-atmosphere interactions on forest expansion, Aug 2018 - June 2021**  
Developed novel, idealized experimental design in CESM2 to test influence of forest establishment on forest expansion (funded by NSF).
